

Table 1 Theoretical calculation for the speed of sound in air

		Note
t (°C)	21.1	to measure (resolution 0.1°C)
r (%)	34	to measure (resolution 1%)
p (Pa)	1.024×10^5	
ps (Pa)		Equation 4 (after lab)
v (m/s)		Equation 3 (after lab)

Table 3. Experimental methods to determine speed of sound (no less than 6 sets?)

Speed of sound in AIR (Traveling wave method)	
f (kHz) (resolution: 0.001kHz)	39.770kHz
i (n = 6-20)	li (mm)
1	3.65
2	12.40
3	20.92
4	28.06
5	37.69
6	45.02
7	54.53
8	63.42
9	72.10
10	80.75
11	89.34
12	97.84
13	106.73
14	115.69
15	124.09
16	132.87
17	141.60
18	150.05
19	158.66
20	167.37

In[1]:= 8.646 * 39.770
